

## Dig , Discover and Say the Sound!

Our little children had an exciting time exploring the letters in the sensory bin.

It was an **Alphabet Hunt** activity, where the bin was filled with colorful, textured materials hiding different letter cards. The children eagerly used their hands to dig, scoop, and search for the letters, making the experience both playful and educational.

As each child found a letter, they confidently identified it and said its sound, helping strengthen their phonics skills, letter recognition, and sound association. The hands-on sensory experience also supported their fine motor development and encouraged focused learning.

# Match Me to My Habitat !

Children enjoyed an exciting activity - **Animal Sorting on the basis of their habitat**, where they discovered the wonderful homes of different animals! With colorful animal figurines in hand, the children eagerly identified whether each one belongs to the **farm, water, or forest** habitat.

As they sorted, they observed shapes, features, and movements—helping them understand **why animals live where they do**.

The classroom buzzed with joy as our learners matched ducks to water, insects to land, and wild animals to the forest. This hands-on experience strengthened their thinking skills, improved their observation abilities, and sparked a love for nature.

# Sparkly Salt Art Magic!

## A Colorful Textured Art Experience

Our young artists had a delightful time exploring **Salt Painting**, a creative activity filled with sparkle, texture, and imagination! Using glue, vibrant colours, and salt, the children watched their artwork come to life with dazzling, crystal-like patterns. As they sprinkled salt and gently brushed colours over it, they were amazed to see how the shades spread and blended, creating a magical textured effect.

This hands-on experience helped them develop their fine motor skills, encouraged colour exploration, and sparked a sense of wonder and creativity.
